MIND MAPPING TUTORIAL

MGMT2094 - Week 2

"Business people don't just need to understand designers better,

They need to become designers."

Roger Martin – Dean Rotman School of Management

WHAT ARE MIND MAPS?

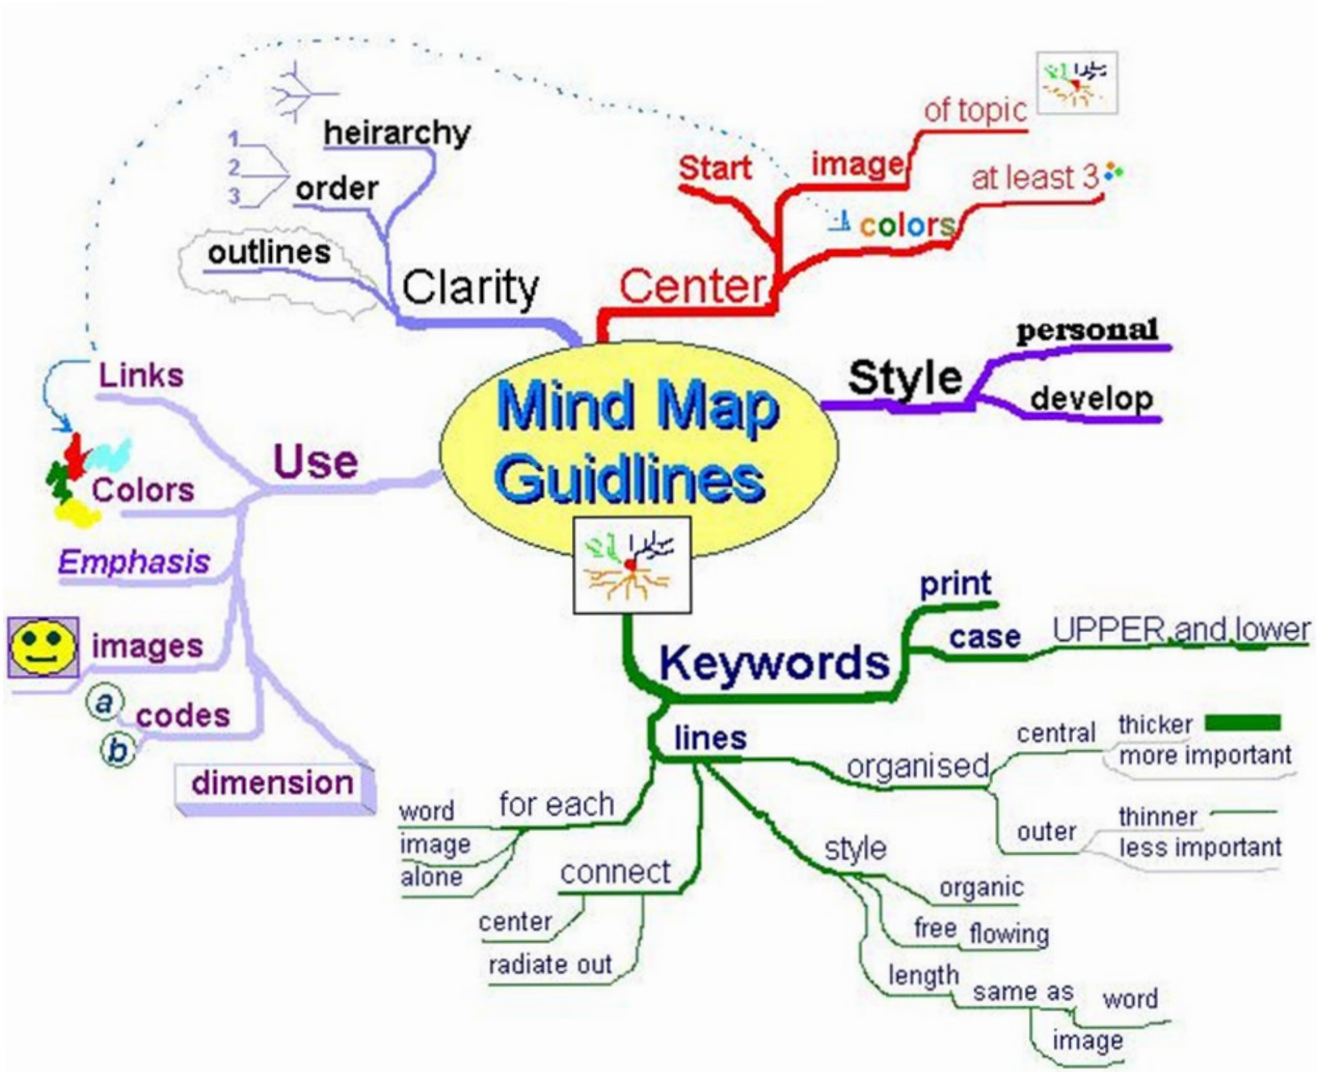

- A mind map is a way to visually organize notes, thoughts, ideas, and conversations.
- Tony Buzan takes the credit for inventing modern mind mapping. (a British psychologist)
- In reality different forms of mind mapping have been used over many centuries – Buzan really just popularized it and offered some theories around why they work so well to capture thoughts and are compatible with the thought process.
- A Mind Map is created around a single word or text, placed in the centre, to which associated ideas, words and concepts are added.
- Mind Maps have many uses including business situations where you could use Mind Maps to document conversations, general note taking, brainstorming, or to tweeze out a strategy or a particularly complicated situation you may face.
- In business mind maps are most frequently used collaboratively – but it is possible to use mind mapping on your own, as an individual.

MIND MAP GUIDELINES

In his books on Mind Maps Buzan suggests using the following guidelines for creating them:

- Start in the centre of a blank page turned as landscape. Why because starting in the centre, gives your brain freedom to spread out in all directions and express itself free and naturally.
- Use an image or picture for your central idea. Why? Because an image is worth a 1000 words and helps you use your imagination. A central image is more interesting, keeps you focused, helps you concentrate.
- Use colours throughout, three colours at minimum. Why? Because colours are as exciting to your brain as are images. Colour adds extra vibrancy and life to your mind map, it adds energy to your creative thinking…
- Connect your main branches to the central image and connect your second and third level branches to the first and second levels etc. Why? Because your brain works by associations. It likes to link two, three or four things together. If you connect the branches, you will understand and remember a lot more easily.
- Make your branches curved, rather than straight lined. Why? Because straight lines are boring to your brain.
- Use one key word per line. Why? Because a single word gives your mind map more power and flexibility. Use upper and lower case
- Use images throughout. Why? As each image gives another 1000 words. Each word/image is best alone and sitting on its own line
- The lines should be connected, starting from the central image. The central lines are thicker, organic and thinner as they radiate out from the centre.
- Make the lines the same length as the word/image they support.
- Develop your own personal style of Mind Mapping.

EXERCISE: (NDIVIDUAL)

- How many windows in your home?
- Now draw a mind map how you went calculating the number of windows
- This exercise demonstrates how we think in radial associations.

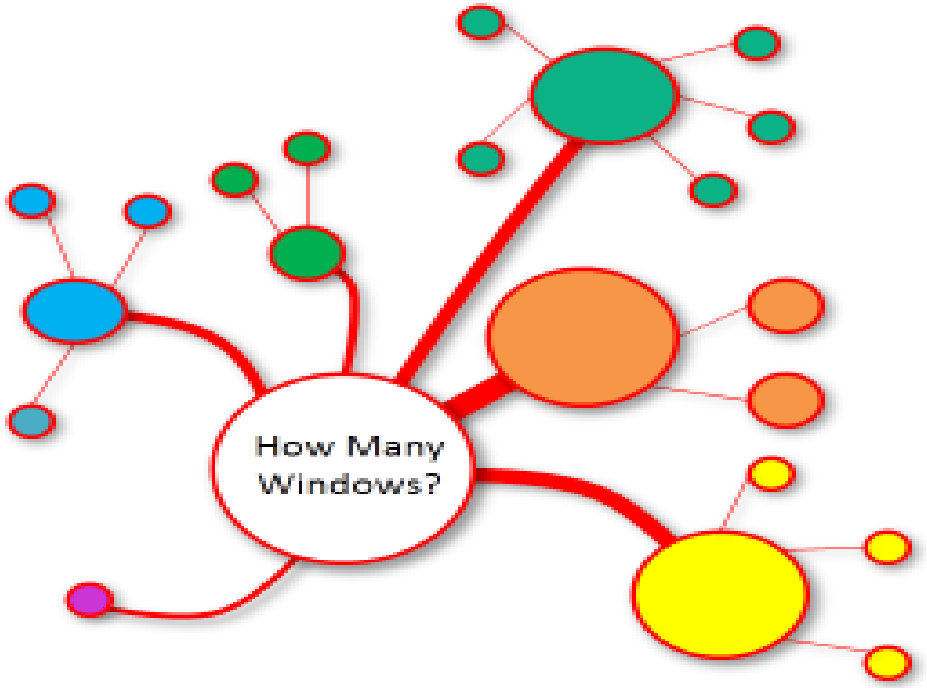

WINDOW MIND MAP DEBRIEF:

- Here's the proof: When I asked you this question you most likely formed a mental picture of your home. That mental picture was then used to create a map that you either navigated from the exterior or interior of your home. That map was formed with all sorts of bits of information – the size of the windows, the size of the room, the window coverings, the hallways and doors that led to the different rooms, the type of window, even the colour of the walls and where the furniture is, and if you were navigating your mental picture from outside, you would have noted your driveway, the landscaping and even the environmental conditions – most likely you chose a sunny day. In all likelihood you didn't require a calculator to add the windows up – instead you mentally navigated from a starting point adding windows along the way until you returned to where you started. You were creating associations to solve a problem.

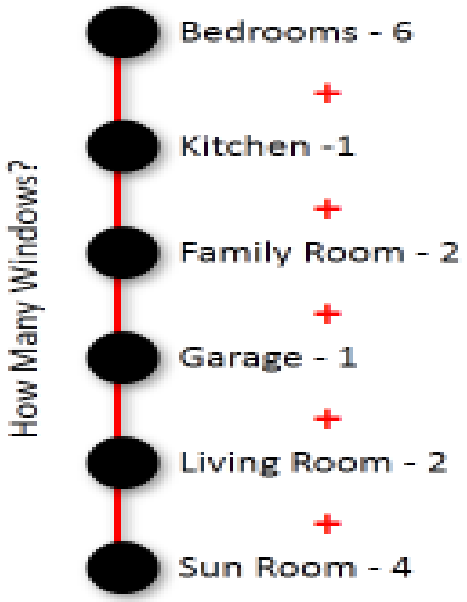

HOW WE THOUGHT ABOUT THE WINDOWS

Not This:

TOTAL = 16

TONY BUZAN TED TALK

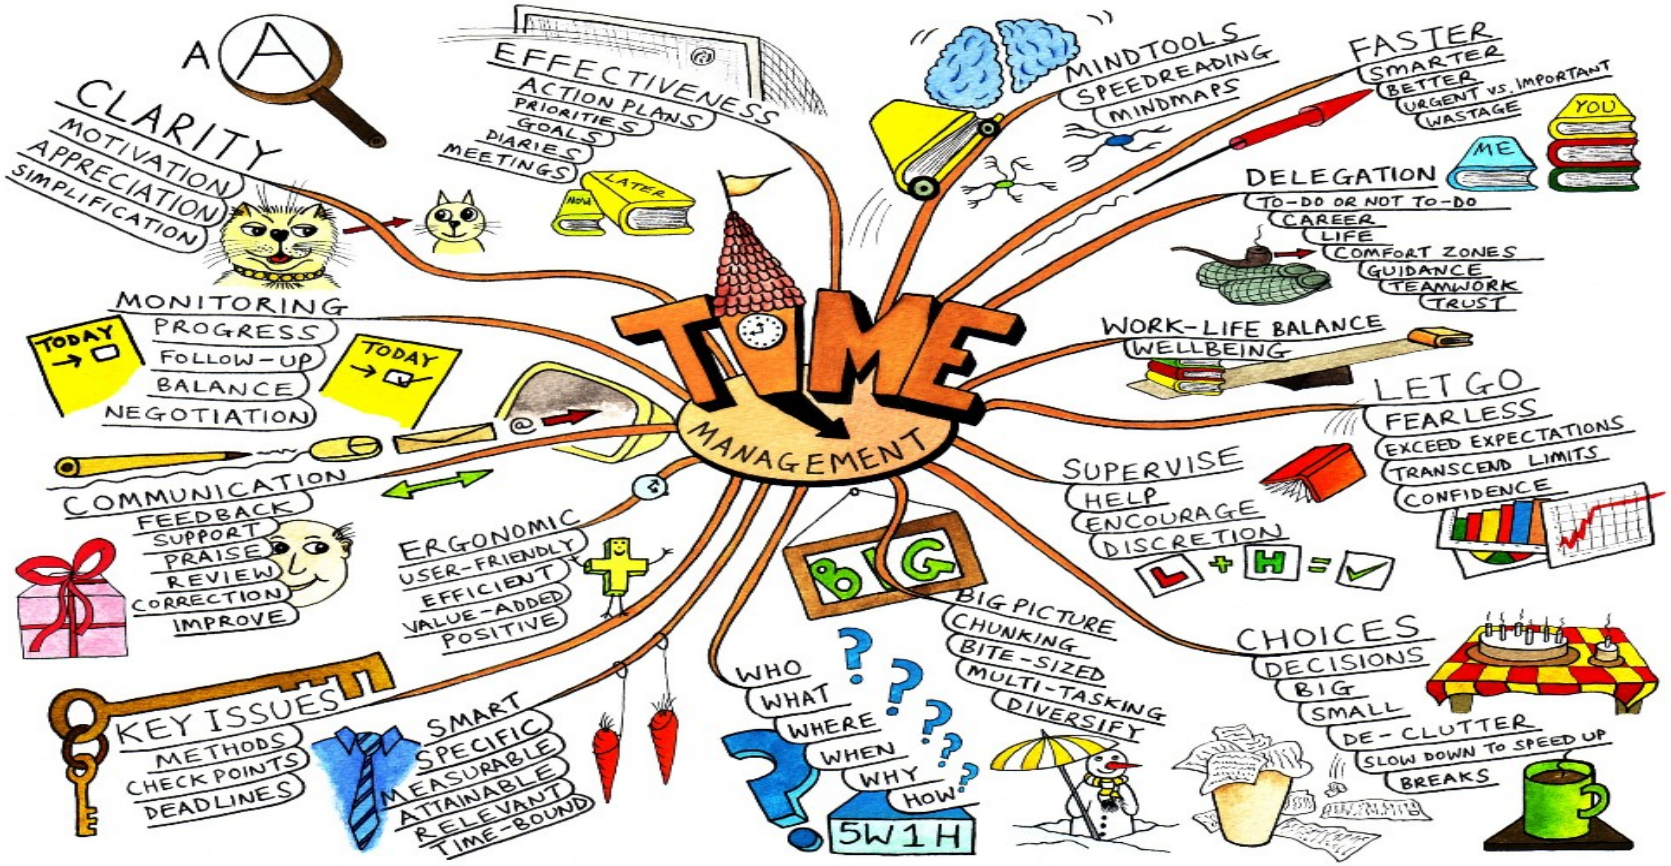

- https://www.youtube.com/watch?v=nMZCghZ1hB4
- Have you watched this link on ilearn (Week 2)
- Discuss with your tutor your Creative Project idea, ensure it is creative and unique….follows the guidelines.
- Whilst your tutor is speaking with groups about ideas, everyone do the following group exercise.

GROUP EXERCISE – TIME MANAGEMENT

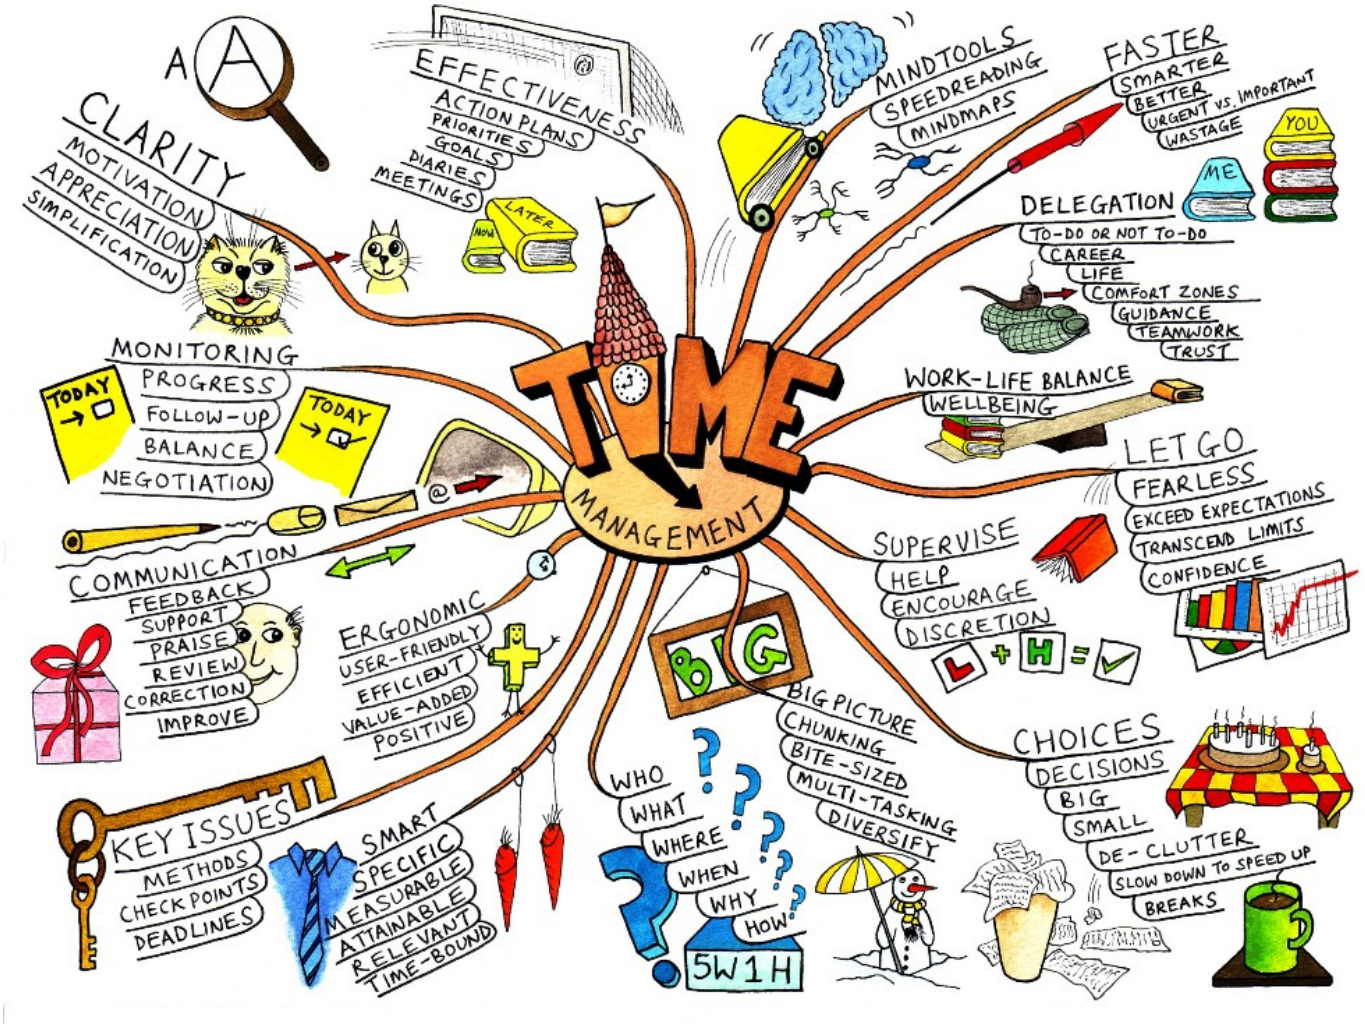

- Be put in groups of 4-5 students
- You have 15 minutes to draw a Time Management Mind Map and then display and explain to the rest of the tutorial class to what you have linked etc.
- Make it visually appealing.
- Note and be able to explain what happened in the group whilst undertaking the mind map!

TIME MANAGEMENT MIND MAP

CRITIQUE THE MIND MAP EXERCISE

- Using the Time Management Map on the previous slide and on this page, what do you think? Is it effective?
- Are there too many branches, is it distracting?
- Is the focus on the images and not the words?
- What should it be? / Does it matter?
- Does the centre image take too much attention?
- How could you improve this mind map?

NEXT WEEK'S TUTORAL:

- **Please be mindful that your creative project mind map is due to be uploaded via Turnitin (link will be on ilearn) in Week 4**
